No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          55,

Heldin C,
```

The present sequence represents murine platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F). PDGF-C polypeptides have the

Claim 27; Fig 6; 135pp; English.

```
proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimularing connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of POGF-C. PDGF-C and also be used to promote flibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation. PDGF-C antagonists can be used to inhibit tumour growth of a tumour correctioned. Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroteukemia, can be identified by testing for expression of PDGF-C antagonists can also be used to inhibit tissue remodelling during invasion of tumour cells into a normal population of cells. Antagonists can also be used to inhibit tissue remodelling for under the lung, kidney or liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

This shows a murine ZVEGF3 a novel vascular endothelial growth factor homologue. Polypeptides comprising an epitope-bearing portion human or murine ZVEGF3 are claimed. The growth factors comprise a growth factor domain and a CUB domain (generic sequence motifs are shown in AAY96859 and AAY96860). The growth factor domain is characterized by an AAY96850 and AAY96860). The growth factor domain is characterized by an AAY96850 cof the "cysteine knot" structure of the platelet-derived growth factor of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CUB domain shows homology to CUB domains in neuropilins, human bone morphogenetic protein-1, porcine seminal plasma protein, bovine acidic seminal fluid protein and Xenopus laevis tolloid protein. The human zvegf3 gene has been mapped to form multimeric proteins. The human zvegf3 gene has been mapped to form multimeric proteins. The human zvegf3 gene has been mapped to chromosome 40438.3.

CYBGF3 is useful for stimulating the growth of fibroblasts or smooth muscles cells, for activating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVEGF3 is useful for requlating (post-development) organ growth, regeneration and maintenance, as well as tissue maintenance and repair processes. ZVEGF3 an anagonists are useful for treating cancer, rheumatoid arthritis, antendarial ischemia, vascular intimal hyperplasia, atherosclerosis, wound characterized processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GRWCGSGTVPGKQTSKGNHIRIRFVSDEYFPSEPGFCIHYSIIMPQVTETTSPSVLPPSS 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the human growth factor homologue zvegf4

(AAB4865), and nucleic acids encoding it (AAC8155). Zvegf4 is a member of the PoGF (platelet-derived growth factor)/MCGF (vascular endothelial growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

C Graracterised by a PDGF cystine knot structure, and a CUB domain (C AAB48655) which has a beta barrel structure, and a CUB domain (C AAB48655) which has a beta barrel structure, and a CUB domain (C C AAB48655) which has a beta barrel structure, and a CUB domain c C C growth. The invention also relates to fusion proteins comprising human c vegf4 or fragments thereof, particularly human zvegf4/human zvegf4 nucleic acids; the recombinant expression of human zvegf4, an antibody which binds to human zvegf4 or a fragment thereof; a method of a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a method of a cell-surface PDGF receptor using a zvegf4-derived polypeptide; and a method of detecting a genetic abnormality in the colloqualing the proliferation, differentiation may an enthod of a patient. Zvegf4 proteins and derived fragments may be comprising exposing bone cells to zvegf4-derived fragments may be consecuted by a patient or repair, or cellular differentiation or proliferation. They are particularly used for the cused to stimulate tissue development or repair, or cellular differentiation or proliferation. They are particularly used to method of soriodontal disease and fractures. They may also be used to ensurite growth (e.g., in the treatment of patient of steadment of cells of an endothelial precursor stem cells, which may be useful in the treatment of endothelial precursor stem cells, which may be useful in the treatment is achieved the anneance of the anneance of the anneance of the anneance of the anneance of the anneance of the anneance of the anneance and the method of the may be useful in the treatment and mobilisation of haematopoietic stem cells immune system.
                                                                                                                                                                                                                                                                                                                    Mouse; zvegf3; zvegf4 fusion; growth factor homologue; VEGF/PDGF family; murine; CUB domain; PDGF-like activity; mitogenic; osteogenic; neovascularisation; tissue repair; proliferation; differentiation; liver damage; neuroregenerative; Alzheimer's disease; multiple sclerosis; periodontal disease; bone fracture; wound healing; vulnerary; ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Growth factor homologs and the nucleic acids that encode them, useful e.g. for treating liver damage, ischemia, multiple sclerosis and Alzheimer's disease.

require particular matrix production, treating fibrosis and required stellate cell activation in a mammal. The method comprises administering a composition containing a Zvegis antagonist in combination with a delivery vehicle. The Zvegis is a protein that is structurally called to platelet-derived growth factor (PDGF) and the vascular condchisal growth factors (VEGF). The Zvegis protein is also designated as "VEGF-R" and "PDGF-C". The Zvegis antagonist is useful to block the mitogenic effects of zvegis and thereby to inhibit or prevent and treat called social social social social social social active conditions. The zvegis and thereby to inhibit or prevent and treat the partitis, full innant viral hepatitis, post necrotic cirrhosis and alphalantirypsin deficiency, fibrotic disorders of the kidney such as continuous and plantity amyloidosis and renal arteriosclerosis, fibrotic disorders of the lung such as silicosis, asbetcosis, idiopathic pulmonary fibrosis, bronchiolitis obliterans-organising pneumonia and pulmonary fibrosis, calsorders of pancreas, fibroproliferative disorders of the bone such as transplant vasculopathy and fibroproliferative continuous is many of disorders of the bone such as cateopetrosis and hyperostosis. The present

The invention relates to an isolated polypeptide, designated zvegf3 (a vascular endothelial growth factor-like protein) of 111-136 amino acid residues in length and comprises the sequence appearing as ABG92889 from amino acid residues 23-35. Also included are an isolated protein comprision a first bolypeptide disulphide bonded to a second polypeptide, where the protein modulates cell proliferation, differentiation, where the protein modulates cell proliferation, differentiation, metabolism or migration, the zvegf 3 encoding polymoleotides and zvegf 3 expression vectors and host cells. Zvegf 3 is useful as additives in tissue adhesives for promoting revascularisation of the healing tissue, for designing molecules that antagonise semaphorin-stimulated activities, including neurite growth, cardiovascular development, cartilage and limb development, and T and B-cell function, and for imaging tumours or other sites of abnormal cell proliferation and in gene therapy applications. The proteins are useful therapentically to stimulate tissue development or repair, or cellular differentiation or proliferation, for stimulating circulatory level of the growth of fibrolast or smooth muscle cells, as molecular weight crossing the ansays for determining circulatory level of the growth of solid tumours, for treating diabetic retinopathy, provided solid tumours, for treating diabetic retinopathy, glomerulosolar therapeution, keloids, liver fibrosis, including scar formation, keloids, liver fibrosis, lung fibrosis, including scar formation, keloids, liver fibrosis, skin wounds, ulcers, burns, skin grafting, and female reproductive tract disorders of therapeutical trephropathy), glomerulosquental ischaemia, scleroders, such and for thrombosis, cardiac sclerosis, neurodegenerating element such and for multiple sclerosis, parkinson's disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, disease, dis
atherosclerosis, skin wound; ulcer; burn; skin grafting;
female reproductive tract disorder; chronic liver disease;
circultatory disorder; heart failure; neurodegenerative disease;
multiple sclerosis; Parkinson's disease; Alzheimer's disease; stroke;
neurite outgrowth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polypeptide, designated zvegf3 useful for treating skin wounds, ulcers, burns, skin grafting, female reproductive tract disorders, Parkinson's disease, and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Shoemaker KE;

The method involves introducing a transgenic PDGF-C DNA into a cell of a non-human animal, introducing the cell into a non-human animal and allowing the cell into a non-human animal. The transgenic animal is useful as a model to study disease states characterised by over-expression of PDGF-C and to find therapy for those diseases, particularly hypertrophy and fibrosis in protein from mouse

The sequences given in AAB47889-90 represent human and mouse zvegf3, respectively. Zvegf3 is a platelet derived growth factor (PDGF) homolog and it was used in the method of the invention for promoting growth of bone, ligament or cartilage and simulating proliferation of osteoblasts or chondrocytes in a mammal. The proteins used were preferably a dimeric protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein, with a delivery vehicle. The method of th invention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, preferably a fracture, bone graft site, implant site, or periodontal pocket, and for stimulating proliferation of osteoblasts or chondrocytes in a mammal. It is further useful for promoting proliferation of osteoblasts, where the bone marrow stem cells, where the bone marrow stem cells are harvested from a patient prior to culture. The method is therefore useful for treating osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LKEBVKLYSCTPRNFSVSIREELKRIDTIFWPGCLLVKRCGGNCACCLHNCNECQCVPRK 300

                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated protein comprising a first polypeptide disulphide-bonded to a second polypeptide. The first and second polypeptides are from 119-138 amino acid residues and comprises 258-370 amino acid residues of human growth factor homologue ZVEGF4. The protein stimulates proliferation, differentiation, or migration of mesenchymal cells and may modulate activities mediated by cell surface semaphorins. ZVEGF4 may be used to design ant/agonists of neuropilin-semaphorin interactions which may be of use in neurite growth, cardiovascular development, cartilage and limb development, T- and B-cell functions as well as treating theumatoid arthritis, various forms of cancer, autoimmune diseases, inflammation, retinopathies, haemangiomas, ischaemic events, neuropathies, acute nerve damage, central nervous system diseases and peripheral nervous system diseases including stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            homomultimers or heteromultimers that act on tissues to control organ development by modulating cell proliferation, migration, differentiation, or metabolism. The gene for human ZVEGF4 is located on chromosome 11q22.3 -23.1. A transgene construct sa made for producing mice transgenic for human ZVEGF4. The present sequence is a ZVEGF4-related protein sequence. The present sequence is a ZVEGF4-related protein sequence. Note: The present sequence is included in the sequence listing but is not mention elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of a growth factor homologue referred to as zvegf3, and the polymucleotide sequence encoding fit. The zvegf3 polypeptide is useful for stimulating the growth of fibroblasts or smooth muscle cells, or for activating a cell-surface platelet-derived growth factor (PDGF) alpha receptor. The zvegf3 polypeptide is useful as a PDGF alpha receptor agonist and thus is useful for treating full-thickness skin wounds, female reproductive tract and prolonged bleeding, periodontal disease, damaged liver tissue, and duodenal ulcers. The polypeptide is also useful as an additive in tissue adhesives for promoting revascularisation of healing tissue. The zvegf3 polypeptide is also useful for treating liver damage including damage due to liver disease, chronic active hepatitis, hepatic chronic passive congestion (CPC), central haemorrhagic necrosis (CHN), hepatic vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated zvegf3 polypeptide, useful for treating cancer, Alzheimer's disease, Parkinson's disease, chronic active hepatitis, hepatic vein thrombosis, comprises growth factor domain and CUB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sheppard PO, Shoemaker KE;
                                                                                                                                                                 Mouse growth factor homologue, zvegf3.
                                     ABG76398 standard; protein; 345 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hart CE, Piddington CS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       99US-0142576P.

thrombosis, portal vein thrombosis, cardiac sclerosis, and many types of cirrhosis. The polypeptide is useful for enhancing expansion and mobilisation of endothelial precursor stem cells, creating and scabilising new vessel formation in areas requiring neovascularisation, creating neovascularisation, creating neovascularisation, creating neovascularisation, creating neovascularisation, creating peripheral neuropathies by increasing spinal cord and sensory neurite outgrowth, and as part of therapeutic treatment for the regeneration of neurite outgrowths created by spinal cord and sensory neurite outgrowth, and as part of therapeutic treatment for the regeneration of neurite outgrowths caused by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating calerodesma, and reducing fibrosis, thus fibrosis, lung calerodema, and reducing fibrosis, and glomerulosclerosis. An antibody that binds cavegf3 is useful for blocking the mitogenic, chemotactic, or angiogenic ceffects of zvegf3, and for treating proliferative vascular disorders, coular neovascularisation, inflammatory disorders, rheumatoid arthritis, psoriasis, cancer, impaired or excessive vasculogenesis or anglogenesis, and diseases of the nervous system. The present sequence represents mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEEPSDGSVL 120

                                                                                                                                                                                                                                                The present invention relates to a method of promoting wound healing, especially a dermal wound and for promoting proliferation of fibroblasts or smooth muscle cells in a mammal, by administering a polypeptide comprising growth factor domain of human growth factor homologue polypeptide, zvegf3. The present sequence is mouse zvegf3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                          9

The invention relates to growth factor homologue zvegf4, its corresponding nucleic acid and methods of using them. The sequences of the invention are used in the study and regulation of cell and tissue development, as components of cell culture media and as diagnostic agents. The zvegf4 polypeptide can be used in treating full-thickness skin wounds, in fracture repair, skin grafting, in constructive healing wounds, in fracture repair, skin grafting, in constructive healing wounds, in fracture repair, skin grafting, in constructive cestabling wounds, in transplanted cells and tissues, or incompanies to promote neovascularisation and increase skin flap survival, to treating female reproductive tract disorders, including acute or chronic placental insufficiency and prolonged bleeding. It can also be used to promote endothelialisation of vascular grafts and stents, in treating acute or chronic lesions of the gastrointestinal tract or treating or repairing liver damage. Zvegf4 can also be used for treating or chronic passive congestion (CPC) and central heamornhagic necrosis (CHN). Crepairing liver damage. Zvegf4 can also be used for treating peripheral neuropathies or modulate neurodegenerative diseases including multiple sclerosis, Alzheimer's disease or Parkinson's disease including multiple sclerosis, Alzheimer's chickesses or Parkinson's disease or the polypeptides, mucleic acids and antipolise and contains and sorders associated with cell loss or abnormal cell proliferation (including cancer). The invention is useful in gene therapy. The present sequence is mouse zvegf3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEFSDGSVL 120

The methods involve administering to the mammal a composition comprising a dimeric protein of human or mouse zvegf3 sequence and a delivery vehicle. Also disclosed are methods for promoting proliferation or differentiation of osteoblasts, osteoclasts, chondrocytes, or bone marrow stem cells. The delivery vehicle is powdered biodegradable polyester, aqueous polymeric gel or fibrin sealant. The methods of the invention are useful for promoting growth of bone, ligament or cartilage in a mammal. The present sequence represents mouse

The present invention describes secreted and transmembrane polypeptides and their polymucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAY41685 to AAX41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

                                                                                                                                                       The present sequence represents a vascular endothelial growth factor related (VEGF-R) protein. VEGF-R can be used in assays to identify compounds that bind to it or that antagonize its activity. VEGF-R antagonists (e.g. anti-VEGF-R antibodies) are useful for inhibiting tissue growth. This is useful for inhibiting tumour growth and for treating cancer. VEGF-R itself can be used to stimulate tissue growth, angiogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of the VEGF-R protein
                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                120

This invention describes the isolation of a novel human vascular candothelial cell growth factor-E (VEGF-E) polypeptide which has cardothelial cell growth factor-E (VEGF-E) polypeptide which has tranquillizer, vulnery and cardiant activity. VEGF-E can be administered to treat cardiovascular or endothelial disorders in mammals, especially be useful in wound repair and tissue generation and may especially be used to treat cardiac hypertrophy It can be combined with a carrier in pharmaceutical compositions, which can be administered to treat disorders as above. VEGF-E can be used to screen for antagonists and agonists, and the antagonists administered to treat cardiovacular degeneration. It can be used to generate antibodies, candiovascular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also useful the detect VEGF-E polypeptide, especially to diagnose are also cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation, by contacting the antibody with a tissue sample and detecting formation of a mantibody-VEGF-E polypeptide complex. Polynucleotides encoding VEGF-E can be used to diagnose cardiovascular and endothelial disorders in the vegetuence is a susceptibility to a disease related to a mutated form of VEGF-E (e.g. cardiovascular, endothelial or angiogenic disorder such as a tumor), by detecting a mutation in the VEGF-E endoding sequence is a disease related or a mutated form of vEGF-E (e.g. cardiovascular, endothelial or angiogenic disorder such as a tumor), by detecting a mutation in the VEGF-Energence and endothelial and endothelial and endothelial complex related from a send to disease related to a mutated form of vEGF-E (e.g. cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular endothelial complex produce argine explaced from a send to disease related to resease related to a mutated form of detect related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

procollagen C-endopeptidase (EC 3.4.24.19) - African clawed frog (clone 22AN)
N.Alternate names: bone morphogenic protein 1
C,Species: Xenopus laevis (African clawed frog)
C,Date: 3.0-Sep-1933 #sequence_revision 20-Aug-1994 #text_change 09-Jul-2004
C,Accession: JC2218
R,Maeno, M.; Xue, Y.; Wood, T.I.; Ong, R.C.; Kung, H.
Gene 114, 257-261, 1993
A,Title: Cloning and expression of cDNA encoding Xenopus laevis bone morphogenetic prote A,Reference number: JC2218; MUID:94085787; PMID:8262384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A, Molecule type: mRNA
